Switch Encryption Modes

PvR supports two encryption modes of encrypted call and encrypted voice message. When in the encrypted call mode, the user can make an encrypted call during normal call state. While in the encrypted voice message mode, the voice short message can be protected by encryption.

Encryption Modes Indication

When PvR is turned on, the indicator light "SEC" will show the encryption mode while in standby state.

- * "SEC" is off, which means PvR is in the encrypted call mode.
- * "SEC" is flashing, which means PvR is in the encrypted voice message mode.

Switch Encryption Modes

- ◇ After PvR being turned on, double press the "Function Button" quickly to switch the encryption modes.
- ◇ PvR will reset to encrypted call mode when is turned off and turned on again

Send & Play Encrypted Voice Message

send encrypted voice message

- ◇ Switch PvR to encrypted voice message mode.
- ◇ Set the IM App to the voice message mode.
- ◇ Speak to the PvR's microphone.

Notice: Before sending encrypted voice message, please make sure the IM App supports sound pickup through Bluetooth. Otherwise, the voice can't be encrypted by PvR.

play encrypted voice message

- ◇ Switch the PvR to encrypted voice message mode.
- ◇ Play the encrypted voice message on the phone, original voice can be heard via PvR after being decrypted.

Change the Key of Voice SMS

In order to play the encrypted voice SMS correctly, both the sender and receiver must use the same key, otherwise only the noise can be heard by receiver. The voice message key can be set by the following web page.

Visit key settings web page

- ◇ Scan the QR code in the right side.
- ◇ Or visit <https://www.rlspeak.com/pvrvmk/>

Scan QR Code

Change the Key

- ◇ Connect PvR to the phone, and switch to the encrypted voice message mode.
- ◇ Increase the volume of PvR to 80%-90% level.
- ◇ Input 6 digits and submit.
- ◇ PvR will broadcast success or failure prompts according to the result of key update.

Notice:

1. the default key is 123456.
2. You can rest assured to use this web page to perform the key replacement operation, this process will not record any device or user information, if you have concerns about security, you can check the webpage code at any time

==Important Notice==

1. The function of encrypted voice SMS is only applicable to apps that support Bluetooth sound pickup, such as WhatsApp(iOS only), Skype, WeChat, and etc.
2. Both the sender and receiver must use the same key.
3. While the PvR is in encrypted voice SMS mode, phone call is not supported and power consumption is also higher. So, please switch the PvR to encrypted call mode or turn it off directly while not in use.
4. The encrypted voice messages stored in the phone is secure, the voice played will be noise unless using PvR the correct key is set.
